Project C - Error Codes

All errors return a JSON body with the fields code, message and request_id. Clients should log request_id when contacting support.

HTTP	Code	Meaning	Retry?
400	invalid_request	Malformed body	No
401	token_expired	Access token expired	After refresh
403	tenant_mismatch	Token tenant differs from resource	No
409	idempotency_conflict	Key reused with different body	No
429	rate_limited	Too many requests	After Retry-After
503	settlement_busy	Settlement job running	Yes
